EDUCATION

North Carolina State University, *Raleigh, NC*

Master of Computer Science

GPA: 4.0

Aug. 2024 – May 2026

PES University, *Bangalore, IN*

Bachelor of Technology, Computer Science

GPA: 8.23

Aug. 2019 – May 2023

SKILLS

Programming Languages: Python, SQL, Java, C++, C, Linux

ML Frameworks: TensorFlow, Keras, PySpark, h2o Wave

Tools & Platforms: Databricks, Palantir, Azure, AWS, PowerBI, Tableau, Excel, Matplotlib, Unity, AI, LLMs

Certifications: Microsoft AZ-900, DP-900, AI-900 | Databricks Lakehouse Fundamentals

Spoken Languages: English, Hindi, Marathi, Mandarin Chinese

EXPERIENCE

Google

Mountain View, CA

Software Engineering Intern

May 2025 – Aug 2025

- Built a **machine learning** evaluation feature for the YouTube Creator Dashboard using Python, validating whether predicted recommendation outcomes (e.g. subscriber growth) fell within statistically expected confidence intervals.
- Owned end-to-end development of the feature independently, collaborating directly with the team lead to navigate access constraints and align on input/output specifications.
- Refactored an initial **Keras** implementation into **TensorFlow** to meet production standards; code delivered for integration into Google's internal creator analytics pipeline.

AT&T

Bangalore, IN

Senior Associate, Data Analysis

Jan 2024 – Jul 2024

- Achieved financial savings of **\$700K/month** by conducting exploratory data analysis on the billing team's internal data.
- Migrated big data across 33 US markets from Oracle to Azure cloud using **PySpark**.

Senior Associate, Data Engineering

Jul 2023 – Jan 2024

- Trained an **unsupervised model** on billing notes to generate labeled input data for a supervised cost-leakage classification model, enabling real-time categorization and **visualization** of cost drivers.
- Automated a task-completion scheduler to notify the team of finished background jobs, reducing manual monitoring overhead.

Technical Intern

Jan 2023 – Jul 2023

- Developed an end-to-end document classification app using OpenAI's GPT API with batch processing support for files containing up to 7,000 inputs.

PROJECTS

Campus Food Delivery App | React, Python, MySQL

- Built a full-stack food delivery app for on-campus orders using React, Python, and MySQL, enabling students traveling the same route to consolidate orders into a single delivery.
- Designed and implemented the relational database schema and backend routing logic; codebase hosted on GitHub.

VR Chinese Character Learning App | Unity, C#

- Developed a VR application in Unity (C#) for teaching handwritten Chinese characters with embedded historical and cultural context overlays in an immersive 3D environment.
- Designed XR interaction flows and spatial UI patterns for intuitive in-headset navigation and stroke-level character practice.

ADHD Personal Assistant: Independent Research | Python, Random Forest, Google Colab

- Created a smartwatch-based personal assistant for adults with ADHD combining accelerometer/gyroscope activity detection with a gamified mobile frontend featuring a virtual pet reward system.
- Trained a Random Forest classifier on the WISDM dataset achieving 84% accuracy (F1: 0.59–0.98) in real-time activity classification (eating, walking, typing) using Python and Google Colab.

LEADERSHIP & ACTIVITIES

- Conducted Python training for 11 interns and co-created a month-long onboarding curriculum at AT&T India.
- Founded Linguista, a language learning club with 200+ members at PES University, organizing events over 2 years.
