SUMMARY

Machine Learning Engineer with experience building production-scale solutions using Python, TensorFlow, PySpark, and cloud platforms. Developed and deployed machine learning models, data pipelines, and AI-powered applications through industry experience at Google and AT&T.

EDUCATION

North Carolina State University, Raleigh, NC <i>Master of Computer Science</i>	GPA: 4.0/4.0 Aug. 2024 – May 2026
PES University, Bangalore, India <i>Bachelor of Technology, Computer Science</i>	GPA: 8.23/10.0 Aug. 2019 – May 2023

EXPERIENCE

Google <i>Software Engineering Intern</i>	Mountain View, CA May 2025 – Aug 2025
- Built a machine learning evaluation feature for the YouTube Creator Dashboard using Python. Validated predicted recommendation outcomes against confidence intervals to surface model quality signals. - Owned end-to-end development, from navigating access constraints to refactoring a Keras prototype into production-grade TensorFlow, and delivered code for integration into Google’s internal creator analytics pipeline.	
AT&T <i>Data Analyst</i>	Bangalore, India Jan 2024 – Jul 2024
- Achieved \$700K/month financial savings by conducting exploratory data analysis on internal billing data. - Migrated big data across 33 US markets from Oracle to Azure cloud using PySpark.	
<i>Data Engineer</i>	Jul 2023 – Jan 2024
- Built a two-stage ML pipeline (unsupervised clustering and supervised classification) to categorize billing cost-leakage drivers in real time, enabling automated visualization of cost contributors. - Automated a task-completion scheduler to notify the team of finished background jobs, reducing manual monitoring overhead.	
<i>Technical Intern</i>	Jan 2023 – Jul 2023
Developed an end-to-end document classification app using OpenAI’s GPT API with batch processing support for files containing up to 7,000 inputs.	

PROJECTS

ADHD Personal Assistant: Independent Research Python, Random Forest, Google Colab	
- Created a smartwatch-based personal assistant for adults with ADHD combining accelerometer/gyroscope activity detection with a gamified mobile frontend featuring a virtual pet reward system. - Trained a Random Forest classifier on the WISDM dataset achieving 84% accuracy (F1: 0.59–0.98, value depending on activity) in real-time activity classification (eating, walking, typing).	
Natural Language Processing: Capstone Project Python, Neo4j	
- Developed an interactive machine translation and text generation model for Tulu by implementing a modified 3-source Hidden Markov Model to optimize syntax arrangement and language learning and preservation. First author on a paper published at the 3rd International Conference on Pervasive Computing and Social Networking (ICPCSN 2023). DOI: 10.1109/ICPCSN58827.2023.00270.	
VR Chinese Character Learning App Unity, C#	
Developed a VR application for teaching handwritten Chinese characters with embedded historical and cultural context overlays in an immersive 3D environment. Designed XR interaction flows and spatial UI patterns.	

LEADERSHIP

- Founded Linguista language learning club at PES University; scaled to 200+ members over 2 years.
- Conducted Python training for 11 interns and co-created a month-long onboarding curriculum at AT&T India.

SKILLS

Programming Languages	Python, SQL, Java, C++, C
ML Frameworks	TensorFlow, Keras, PySpark, h2o Wave
Tools & Platforms	Databricks, Palantir, Azure, AWS, PowerBI, Tableau, Excel, Matplotlib, Unity, Linux
Certifications	Microsoft AZ-900, DP-900, AI-900 Databricks Lakehouse Fundamentals
Spoken Languages	English, Hindi, Marathi, Mandarin Chinese
